

LIVE BIRDS HANDLING

HYDRAULIC ELEVATOR

DESCRIPTION

This machine is used to have a easy hang of the poultry to the defeathering line. The machine works with Cattaruzzi containers or traditional plastic crates positioned on the platform with a forklift, on a hydraulic elevator can work two people; The function of the machine is to rise the crates, stacked on pallets, at the right position for the operator. With a single elevator two people can hang 2.000 B/h (depending on the labour ability). The elevator is made in hot dip galvanised steel with platform moved up and down by an hydraulic device.

TECHNICAL DATA

Capacity (load) 900 B/h

Lenght 1.300 mm

Width 1.300 mm

Height 3.300 mm

Power installed 0,75 kw

Total weight 320 kg

Shipping volume 2,5 M³
